Kuwait
11-13 December 2017
Traditionally, “analysis” has not been a priority in NSOs

• Lack of will?
• … and/or lack of skill?
Analysis is… : Some synonyms:

- Comments
- Interpretation
- Study
- Breakdown
- Explanation
- Research
- “Storytelling”
Analysis for whom?

- Media
- Government organizations
- NGOs
- The informed public
- Students/teachers
- But also the (so-called) experts!
Analysis is user-friendly

• In a complex society, readers need to be guided through the jungle of numbers: “What do the numbers really mean”?
• The users need explanations, interpretations and comments to understand the figures
...and “producer-friendly”

- Analysis forces us to look closer at the data: concepts, definitions, measurements, sampling, etc. and provides important feedback into the statistical production process, increasing the quality of statistics, by uncovering errors and mistakes in the statistics
Analysis is ...

- To select among all the possible numbers

- What is…
  - Important?
  - Interesting?
  - Relevant?
  - New?
  - Surprising?
General motto: **KISS!**

- **Keep It Short and Simple**
  - Tables
  - Graphs
  - Text
  - Titles
Analysis is …

• **To compare:** point out differences, trends and tendencies
  – Over time/time series
  – Between groups
  – Or both

• And to make the figures comparable

• **Statistical significance vs. social importance**
In analysis...

- Use relative rather than absolute numbers: percentages, ratios, per capita, per 1,000 pop., ...
- If possible, use loooooong time series
- Use rounded numbers
Types of analysis?

- News releases = comments → media
- Popular presentations = descriptive → Posters/brochures
- Presenting results from a survey = reporting
- Thematic analysis = ”interpretation” → Social reports/Women & Men
- [In depth analysis/research = ”explanation” → Research report]
Constructing tables is the first step of analysis:

• When constructing a table; we implicitly start analysing:
  – What is the dependent variable (indicator)?
  – What are the (most important) background (classification) variable(s) (and why)?

• A table is always (or should be) constructed on basis of certain ideas about relations between variables, which is also the basis of analysis.
Titles are important!

Titles should...

- attract the attention of the readers
- create curiosity
- give a representative summary of the content
- be maximum one line
- 50/50
Titles

Don’t hide the message: Use an informative title:

Not:
"Results from the Labour Force Survey"

But:
"More women working"
Titles of news releases: Some examples
Press Release

On consumer price changes in October 2013

As compared with September 2013, consumer price index for goods and services was 101.9% in October and 112%, as compared with December 2012.

Income of population during January-November, 2013

During January – November of current year income of population increased by 7.9% compared to the same period of last year and it was reached to 32.3 milliard manat, its volume on per capita increased by 6.5% and it was formed 3471.7 manat or on average in a month 315.6 manat. Growth of income on per capita increased by 4.2% and it was become to 6.3%.
During this period 68.0% of income was spent to final consumption by the country population, 9.0 % - to the taxes, social insurance and membership dues, 1.8 % - to the payment of percents on credits, 21.2%8% - to the deposits.
After payment of all compulsory and voluntary fees in amount of 29.4 milliard manat or more than 7.9% compared to previous year income remained in the population disposal.
Also sub-titles are important

Should also be informative:

Not:
"Employment by sex and age"

But:
"Increasing unemployment among young women"

Name and title

Labour Force Survey, 2010
More women in the labour force

Maximum one line.
No numbers
After being stable for some years, the labour force participation rate for women in 2007 reached 69 per cent, compared to 76 per cent for men. Weekly working hours are also increasing.
Labour Force Survey Q3 2007

Higher participation rate among elderly

From the third quarter of 2006 to the third quarter of 2007, the labour force participation rate increased by 2.3 percentage points among people aged 55-66 years. For the population aged 15-74, the labour force participation rate rose by 0.7 percentage points.

From the third quarter of 2006 to the third quarter of 2007, employment rose by 78,000. The number of people in full-time employment increased by 90,000, while the number of people in part-time employment fell by 13,000. Average settled working hours were 34.7 hours per week, compared with 34.5 in the third quarter of 2006. Average settled working hours for men were 37.7 hours per week, compared with 31.3 hours for women.

Higher labour force participation for the elderly

The labour force (the sum of employment and unemployment) increased by 58,000 people from the third quarter of 2006 to the third quarter of 2007. In the same period, the working-age population (aged 15-74) rose by 48,000. The proportion of 55-66 year olds in the labour force increased from 63.3 to 65.6 per cent. The labour force participation rate for women rose by 1.0 percentage point, compared with 0.4 percentage points for men.

Number of employees on temporary contracts unchanged

238,000 were on temporary contracts in the third quarter of 2007. This was more or less unchanged from the third quarter of 2006. Hotels and restaurants have the highest share of employees on temporary contracts, with 21.3 per cent. Education and health and social work are also industries with a high share of employees on temporary contracts with 14.9 per cent. Transport and communication (5.6 per cent) and manufacturing (6.6 per cent) had the lowest shares of temporary employees.

Unemployment fell by 20,000

According to the LFS, the number of unemployed fell by 20,000 from the third quarter of 2006 to the third quarter of 2007. The decline mainly took place in the age group 25-54 years, where the unemployment fell by 15,000. The unemployment rate stood at 2.5 per cent.

The proportion of long-term unemployed - defined as persons who have been unemployed for at least six consecutive months - was 25 per cent in the third quarter of 2007, down 6 percentage points from the third quarter of 2006. The reduction in unemployment has come both among people who have been unemployed for shorter periods as well as the long-term unemployed. However, the relative reduction was largest among the long-term unemployed.

Employment, June–August 2012
September 2012

**Euro area unemployment rate at 11.6%**
**EU27 at 10.6%**

The euro area\(^1\) (EA17) seasonally-adjusted\(^2\) unemployment rate\(^3\) was 11.6% in September 2012, up from 11.5% in August\(^4\). The EU27\(^1\) unemployment rate was 10.6% in September 2012, stable compared with August\(^4\). In both zones, rates have risen significantly compared with September 2011, when they were 10.3% and 9.8%. 

Serhat ATAKUL
Improved export market
28 January 2014
Norwegian industrial managers experienced further growth in total output, and the short-term outlook seems to be positive. A rise in new orders and improved prices in export markets explain this development.

GP's and emergency primary health care, 2012
23 January 2014
In 2012, 19 per cent of the population had consultation with the municipal emergency primary health care services. 36 per cent of children less than 6 years of age have had a consultation during the past year.

News releases/articles/reports: A good mix of tables, graphs and text

Good tables and graphs should support and complement the text
Tables:
Present the details

Graphs:
Show developments over time and/or differences between groups

Text:
Put the numbers into context, explains
Numbers in the text:

34.6 thousand  Better: 34,600

But:
34.6 million
Guidelines for writing:

• Use a simple language

• Short sentences and paragraphs

• Don’t write:

“Table 5 indicates/shows that 65 percent of households in urban areas…”

• When possible, present time series

• But: Be careful not to focus too much on short-term changes, without looking at the more long-term trend
Lost in translation?

• Statistics is an international language, but…

• In many NSOs translation [into English] is not taken seriously

• Result: Mistakes, ambiguities, confusion

• Which can be damaging to the NSO’s reputation
Two things to avoid when analyzing:

1. "Table-reading": Commenting all (or most) figures in a table and overloading the text with too many numbers:

   “From table 5.4 we see that the net enrolment rate of women in primary schools is now 87.6 per cent, compared to 84.5 among men. In 2010 the rates were 83.4 and 83.6, respectively”.

Instead, write something like:

   “While the net enrolment rates of men and women were identical in 2010, more women than men are now enrolled in primary schools”.
Press releases

Birth rate: 9.0‰
Mortality rate: 14.2‰
Natural increase rate: -5.2‰

Estimated population in Serbia number 7258753 in 2011. In relation to the previous year the number fell from 32683 or 0.5 index points.

In the same period, the number of live births fell from 68304 to 65598 (by 2706). The number of deaths decreased slightly and amounts to 102935, while 103211 persons died in 2010. Thus, the natural increase of the population of Serbia fell from -34907 in 2010 to -37337 in 2011.

Observed in terms of rates, the trends are as follows: the birth rate decreased from 9.4 to 9.0 live births per 1000 inhabitants.

The mortality rate is at the same level of 14.2 deaths per 1000 inhabitants.

The municipalities with the lowest birth rate are: Gadjin Han (3.7‰), Rekovac (4.0‰), Svrljig (4.1‰), Kucevo (4.3‰) and Osecina (4.4‰), and the municipalities with the highest birth rate are: Tutin (16.8‰), Novi Pazar – town (15.3‰), Novi Sad (12.8‰), Belgrade – Zemun (11.6‰), Belgrade – Zvezdara (11.6‰).

The municipalities with the lowest mortality rate are: Tutin (7.1‰), Presevo (7.2‰), Bujanovac (7.8‰), Novi Pazar – town (8.1‰) and Sjenica (9.5‰), and the municipalities where this rate is the highest are: Crna Trava (35.7‰), Babusnica (28.6‰), Rekovac (26.8‰), Svrljig (26.1‰) and Zabari (24.1‰).

Suicide Statistics, 2012

Until 2012 suicide events were attained as a format of ID number from The General Police Headquarters and suicide events attaining as a format of name. Since 2012 suicide events have started to be retrieved on the basis of ID numbers from both The General Police Headquarters and The General Gendarmerie Commandership formerly which was retrieved on the basis of ID numbers from The General Police Headquarters as on the basis of names from The General Gendarmerie Commandership until 2012. Retrieved data from The General Police Headquarters and The General Gendarmerie Commandership on the basis of ID numbers are matched with registers of death certificate and registers of the General Directorate of Prisons and Detention Houses. Therefore, since 2012 the suicide statistics that does not take place in the registers of The General Police Headquarters and The General Gendarmerie Commandership have been also included. Suicide statistics published in news bulletin for the first time this year will be publicized with an annual news bulletin from now on.

Number of suicides was 3,225

Number of suicides resulting in death was 3,225 in 2012. 72% of suicides were males and 28% of suicides were females.

Crude suicide rate was 4.29 per hundred thousand

Crude suicide rate representing the number of suicides per hundred thousand population was 4.29 per hundred thousand in 2012. It means that four of per hundred thousand people commit suicide.

The province which had the highest crude suicide rate was Uşak

Crude suicide rate was analyzed by provinces. In 2012 the province which had the highest crude suicide rate was Uşak with 8.5 per hundred thousand. Kastamonu with 8.06 per hundred thousand, Iğdır with 7.36 per hundred thousand, Aydın with 7.28 per hundred thousand follow the province of Uşak. The province which had the lowest crude suicide rate was Bartın with 1.6 per hundred thousand. Batman with 1.7 per hundred thousand, Van with 2.22 per hundred thousand and Gümüşhane with 2.24 per hundred thousand follow the province of Bartın.

| Artvin 7.8                                   | Siirt 3.4                                   | Artvin 7.7                                   | Siirt 3.3                                   |
| Giresun 7.7                                  | Şanlıurfa 3.5                                | Bartın 7.7                                   | Van 3.4                                     |
| Burdur 7.7                                   | Muş 3.7                                     | Edirne 7.5                                   | Bitlis 3.4                                  |
The text should add something to the tables:

- It should put the figures into context
- It should explain (the unexpected)
- Is there a pattern?
- What do the figures/changes/differences mean?
- In short: To make statistics informative and meaningful to the reader
Most of the suicides were seen in elderly population

Age specific suicide rates were examined, while the most suicide events was seen in “75+” age group with 8.08 per hundred thousand, the lowest suicide events was seen in “35-39” age group with 4.56 per hundred thousand. While the age group having highest crude suicide rate for males was 75+ age group with 14.63 per hundred thousand, this rate for females was in “15-19” age group with 5.52 per hundred thousand.

The most suicide event was seen in married people. 48.8% of people who committed suicide were married, 38.4% was “never married”, 5.6% was “divorced”. Marital status of people who committed suicides were examined by sex, while the most suicides were seen in “married” males, the most suicides were seen in “married” and “never married” females.

Suicide statistics, 2013
If you have to present the numbers, rounding helps:

**A:** “From 2000 to 2012 the number of female students increased from 32,765 to 65,756, while the number of male students increased from 28,435 to 43,567”.

**B:** “From 2000 to 2012 the number of female students increased from 32.8 thousand to 65.8, while the number of male students increased from 28.4 to 43.6 thousand”.

**C:** “From 2000 to 2012 the number of female students increased from 32,800 to 65,800, while the number of male students increased from 28,400 to 43,600”. 
Two things to avoid when analyzing:

2. "Elevator statistics": Commenting only the increase/decrease since last year/quarter/month, without looking at the more long term trend
Avoid using "Elevator statistics": Commenting only the increase/decrease since last year/quarter/month, without looking at the more long term trend

Marriages and divorces in the Republic of Serbia, 2011

In 2011, marriage statistics noted a slight decrease of marriages by 0.02% in relation to 2010, i.e. a fall from 35815 in 2010 to 35808 registered marriages in 2011. The average age at marriage is unchanged compared to the previous year, being 30 years for women and 33 for men.

The number of first marriages in the Republic of Serbia increased in relation to 2010, amounting to 30014. The average age at first marriage for men is 30 years and for women 27 years.

Homogenous marriages, i.e. marriages in which spouses are of the same nationality (92%) are the most common. As to educational attainment, of the total number of marriages the most numerous are those where spouses have the same educational attainment (66%), then those where the bride has higher educational attainment than the groom (19%), and the less numerous are marriages where the groom has higher educational attainment than the bride (15%). When observing spouses’ activity, in 44% marriages both spouses are active persons and perform an occupation. The number of divorces grew in 2011, from 6644 in 2010 to 8251 divorces. The average age at divorce is 39 years for women and 43 for men. The average duration of a dissolved marriage amounted to 12.7 years in 2011 to 12.5 years in 2010.

In 2011, the largest number of divorces was among spouses without children – 45%, and marriages were divorced most often in the first four years of marriage. After the divorce, custody over dependent children was granted to the mother in 79% of cases.

In the period from 2002 to 2011, slight decrease was noted in the number of marriages in the Republic of Serbia. In 2011, five marriages per 1000 inhabitants were concluded, which presents a fall when compared to the number of marriages in the census year 2002 when six marriages per 1000 inhabitants were concluded. The number of divorces per 1000 inhabitants in 2011 is unchanged in relation to 2002, amounting to one divorce per 1000 inhabitants.

1) Starting from 1999 the Statistical Office of the Republic of Serbia has not at disposal and may not provide available certain data relative to AP Kosovo and Metohia and therefore these data are not included in the coverage for the Republic of Serbia (total).

Suicide Statistics, 2012

Until 2012 suicide events were attained as a format of ID number from The General Police Headquarters and suicide events obtaining as a format of name. Since 2012 suicide events have started to be retrieved on the basis of ID numbers from both The General Police Headquarters and The General Gendarmerie Command which were retrieved on the basis of ID numbers from The General Police Headquarters as on the basis of names from The General Gendarmerie Command until 2012. Retrieved data from The General Police Headquarters and The General Gendarmerie Command on the basis of ID numbers are matched with registers of death certificate and registers of the General Directorate of Prisons and Detention Houses. Therefore, since 2012 the suicide statistics that does not take place in the registers of The General Police Headquarters and The General Gendarmerie Command have also been included. Suicide statistics published in news bulletin for the first time this year will be publicized with an annual news bulletin from now on.

Number of suicides was 3,225

Number of suicides resulting in death was 3,225 in 2012. 72% of suicides were males and 28% of suicides were females.

Crude suicide rate was 4.28 per hundred thousand

Crude suicide rate representing the number of suicides per hundred thousand population was 4.28 per hundred thousand in 2012. It means that four of per hundred thousand people commit suicide.

The province which had the highest crude suicide rate was Uşak.

Crude suicide rate was analyzed by provinces, in 2012 the province which had the highest crude suicide rate was Uşak with 6.5 per hundred thousand. Kastamonu with 5.06 per hundred thousand, Iğdır with 7.38 per hundred thousand, Aydın with 7.28 per hundred thousand follow the province of Uşak. The province which had the lowest crude suicide rate was Bartın with 1.6 per hundred thousand. Batman with 1.7 per hundred thousand, Van with 2.22 per hundred thousand and Gümüşhane with 2.24 per hundred thousand follow the province of Bartın.
