Compilation method of household final consumption expenditure

- **Direct method**
  - Household income & expenditure survey (Susenas/SBH)
  - Food balances (NBM)
  - International trade statistic (exports, imports)
  - Retail trade statistic

- **Commodity Flow Approach**
  
  supply of goods & services – IC – GC – GFCF – Exports = 0
Household Actual Final Consumption

- Value of goods and services consumed and used by households

- Including:
  - Household expenditures on consumption
  - Social Transfers received from government or NPISH
Social transfer in kinds

- Government and NPISH final consumption expenditures as current transfer in kinds given to individuals or households
  - Expenditure of NPISH final consumption in the form of services to individuals/households (current transfer)
  - Expenditure of Government final consumption in the form of services to individuals/households (current transfer)
Transfer in kinds … (2)

- Amounts of transfer in kinds is recorded as income under Resources side of Redistribution of Income Account of household
- and as uses in Adjusted Disposable Income of household
Transfer in kinds … (3)

- Transfer in kinds is recorded under Uses side in Redistribution of income account.
- and it is subtracted from consumption expenditure under Uses side in Adjusted disposable income of general government and NPISH.
Transfer in kinds … (4)

- Government and NPISH expenditures which classified as transfer in kinds:
  - Health
  - Education
  - Culture, religion, other community services
  - Housing and re-use collection
  - Including purchase of goods and services made by government destined to be given to households, which is not part of government production activity
Transfer in kinds … (5)

Example: Government is allocated $50 mil. into education. Education institutions owned by government are received $12 mil. from tuition fee, books sales and other educational services.

- Household consumption expenditure = $12 million
- Government consumption expenditure = $50 - $12 = $38 million
Transfer in kinds ... (6)

- Government consumption expenditure on education is transfer in kinds

- Transfer in kinds = $38 million
- Household received (adjusted disposable income) = household income + $38 mil.
  and
- Household actual final consumption = 12 + 38 = $50 million

Data sources

- Household consumption data from Household Income and Expenditure Survey (Susenas) and Household Budget Survey (SBH) as benchmark data;
- Consumer Price Index (CPI) as deflator
Estimation method

- Special study revealed that Susenas data on urban household consumption is under estimate, while rural household consumption is representative.

- Adjustment being made to correct urban household consumption using ratios of consumption value based on SBH and urban household consumption based on Susenas.
Flowchart of household final consumption at current price

- Household consumption (Susenas)
- Urban
- Rural
- Correction factors
- Adjusted urban household consumption

Household final consumption at current price
Flowchart of household final consumption at constant price
